Dear sir/madam,

I am currently a junior in the University of Wisconsin Madison. I have always been passionate about programming, which is why I started programming from my high school itself. I have taken CS courses like Program Design 2,Discrete Mathematics, Programming Practicum, Data Structures and Machine Organization, Into to Optimization. Currently I am taking classes like Compilers and Database Management Systems. I am very familiar with programming languages like C, C++ and Java. I am also good with scripting languages like PHP, MYSQL, CSS, Java Script and HTM. Currently I am working at the psychiatry department at "Student Helpdesk Support". Here I do computer troubleshooting and Active Directories Management. I am also currently working as the guest service event staff, in the UW Athletics department. With this job I have gained teamwork and leadership skills. Last year I was working as Scientific Research Aide in my previous university (University of Illinois at Chicago) where I transferred. In that job I dealt with database management systems and IT support for the college of Engineering, which involves troubleshooting computer issues. I have experience in Windows, Ubuntu and Macintosh.

I have volunteered as an office assistant in Institute of Palliative Medicine, Kozhikode, Kerala, India. My responsibilities included office support, data entry, people record management and fund raising. With this volunteer ship I made a lot of interactions with people, which boosted up my communication skills.

When I was I high school me and a couple of my friends conducted a citywide badminton tournament. I was in charge of fund raising and organizing the tournament. In the beginning I felt that it was a lot to handle but got over it and passed with flying colors which helped me develop my leadership qualities.

In the future I want to be a very successful person and one of the best software engineers in the industry. If you have any further questions or would like to schedule an interview, please contact me at 3124781133.

Sincerely,

Pranav Rajiv
